

The FREEDOM You and Your Pet Deserve.

- ▶ Full size pre-hung unit with factory installed pet door*
- ▶ Weatherproof design tightly seals the Pet Door frame and resists water leakage
- ▶ Pet Doors feature internal strengthening ribs to ensure reliable performance for many years
- ▶ Primed and ready to paint
- ▶ Prepainted doors in 9 standard colors available (Special Order)
- ▶ 3 easy steps to measure for the right fit, see reverse

*Please note this unit does not meet Florida Building Code.

Pet Door Size & Measurement Guidelines

Choosing the Right Option

"Rise" is the height from the floor to the bottom of the flap in the pet door when installed in your door. In other words, it is the height your pet must step over to enter or exit the pet door.

The pet door insert conveniently comes with the rise already calculated. If you have a short or small pet, select the 8" rise option. If your pet is tall or larger, select the 10-1/2" rise option.

Note: The Pet Door rise takes into account 3" to clear bottom reinforced edges of entry door.

Measuring for the Right Fit

1. It is ideal that the widest part of the pet is less than 10", not including fur, to easily fit through the width of the flap opening.
2. Take a height measurement from the top of the shoulders to the bottom of the chest or belly, whichever is the tallest part. Now, add two inches to the height measurement to determine if pet can easily fit through 16-1/2", the height of the flap opening.
3. Measure the withers from the top of the shoulders to the floor to determine which rise is the right option. Remember, the Pet Door insert's rises are 8" or 10-1/2". Taking into account this measurement, the 8" rise is recommended for shorter pets with a 24-1/2" maximum withers measurement and the 10-1/2" rise is for taller pets with a 27" maximum withers measurement.

Note: As a general rule of thumb, the shorter the rise the better. As pets age, they can develop arthritis making it more difficult to step over a high rise.
